# Bus tours of Latrobe Valley mines and power stations ...get on board!

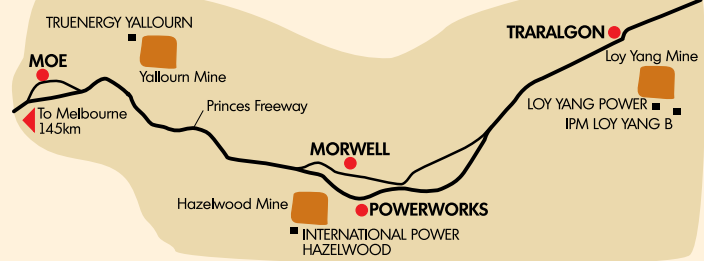

The Latrobe Region of Victoria is the location of the vast thermal power resources based on brown coal which generate more than 85% of the electricity needs of Victoria.

A visit to PowerWorks Energy Technology Centre and participation in one of its tours or programs will help you understand this natural and engineering marvel while seeing energy technology and environmental management in action.

By visiting PowerWorks Energy Technology Centre you will experience multimedia and interactive exhibits, working models and large scale displays in the surrounding gardens.

A visit to the Centre can be as part of a group or as a casual visitor and is designed to inform and orientate you before a tour to one of the three open cut mines... Yallourn, Hazelwood or Loy Yang and an inside view of a power station and its impressive technology.

**Follow the signs from the Freeway.**

**Explore Clean Coal Technologies and learn about how the power industry is reducing greenhouse emissions.**

PowerWorks is open week days Monday-Friday 9am-5pm.

Public tours depart at 11am daily.

Enclosed footwear required on tours.

School tours at any time. Weekend group tours by appointment only.

**RIDGE ROAD MORWELL VICTORIA AUSTRALIA**
